

1. PERSONAL FINANCE TRACKER DASHBOARD

Abstract

The Personal Finance Tracker Dashboard is a data analysis project developed to help users monitor their daily expenses, analyze spending habits, and predict future savings. The system uses Python, Pandas, Matplotlib, and Streamlit to provide interactive visualizations and insights.

Objective

- Track daily expenses.
- Categorize expenditures.
- Visualize spending patterns.
- Predict future savings.

Tools and Technologies

- Python
- Pandas
- Matplotlib
- Streamlit
- Scikit-Learn

Methodology

- Collected expense data.
- Stored data in CSV format.
- Performed data cleaning and preprocessing.
- Calculated category-wise expenses.
- Created visualizations using Matplotlib.
- Trained a Linear Regression model for savings prediction.
- Developed an interactive dashboard using Streamlit.

Results

- Successfully analyzed expenses.
- Generated category-wise spending charts.
- Predicted monthly savings.
- Developed a user-friendly dashboard.

Conclusion

The project data machine users in personal effectively.

demonstrates how analytics and learning can assist managing finances
